1. FEATURES

Power supply: **3.3V - 15V**

Weight: **7g**

Dimension: **21x32x5.5mm**

Operating range: **up to 30 meters**

Modes: **AP, AP+Client, Client**

Standard: **802.11b/g/n**

Encryption: **Open, WEP, WPA, WPA2**

Configuration: **Web Interface**

Power consumption: **80 – 350mA**

Supported devices:

- **Android (available on the Google Play)**
- **iOS (available on the Apple TestFlight)**
- **PC (from software 2.0.2)**
- **Mac (from software 2.0.2)**

Support for Firmware Updates

2. CONNECTION

Wiring photo

Wire Meaning

VCC	Positive powering lead: 3.3V – 15V
GND	Ground powering lead
RX	Communication lead; SYS port
TX	Communication lead; SYS port

NOTE

TX wire must be always closer to the SYS label

RX wire must be always in the center pin of the SYS port

VCC and GND can be connected to any port, except ELE/PIT/AIL and SYS. It can be connected to a receiver port too.

If powered from a separate battery, GND must be connected with the unit's power source.

Do not connect communication cable to the power supply!

It can be connected only to the SYS port.

3. CONFIGURATION

Spirit Wifi-Link offers you user friendly configuration from any device that support WiFi connection and web browser.

To open it, you can proceed in this way:

1. Connect to the Wifi module.

Default SSID (Wifi site name): **Spirit Wifi-Link**.

The module is by default in the **Access Point mode**.

You can connect to the AP directly in a normal way.

After connection, your device will get IP address automaticaly.

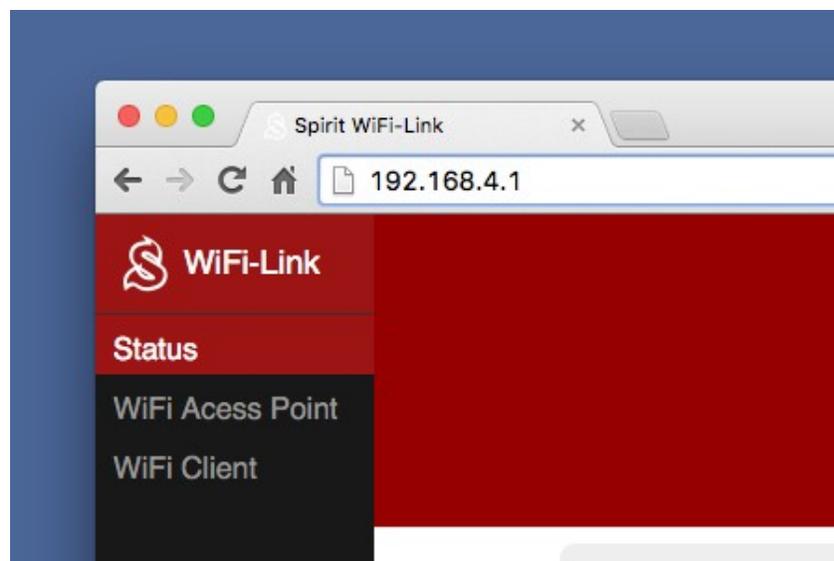

2. Open your web browser.

Usually any modern web browser with JavaScript support can be used.

3. Enter the module with this address: <http://192.168.4.1>

By entering „192.168.4.1“ you will get into the configuration.

Here you can change any parameter including changing SSID, password or wireless mode.

NOTE

For beginners, we recommend default settings.

AP+Client Mode (For experienced users only)

Module is able to connect to an existing WiFi station (e.g. your home site). By entering the configuration interface, you can set the AP+Client mode. In this mode you can find your network and connect to it. In this way, module can be accessed from any device, that is connected to your WiFi site, even via an ethernet cable.

If you are connected to an existing WiFi station, the module will receive second IP address. You can find such IP address in the configuration interface.

You can connect to the interface from the second IP address when accessing from your network.

You can also access the internet or module at the same time.

Connecting to an existing network

1. Connect to the Spirit Wifi-Link.
2. Enter the WiFi Client section in the web interface.
3. Click the „Switch to AP+Client mode“ (if not already).
4. Wait a few seconds to display all available Wi-Fi networks.
5. In the WiFi Association select Wi-Fi network you want to connect.
6. Enter password of the Wi-Fi network (if required).
7. Click the Connect button and wait for the success notification.
8. Remember the address that will appear in the „WiFi address“ entry – this IP address should be used to connect the module through the network you are connected to.

4. USAGE

When Spirit unit with the module are running, you can proceed with the following steps:

Android

1. Download the latest „Spirit Settings“ app from the Google Play.
2. Go to the Settings/Wi-Fi in the Android, search for a new networks.
3. Connect to the „Spirit Wifi-Link ...“ network.
4. Open the Spirit Settings app.
5. Go to the Connection and select WIFI device.
6. Click the Connect button and you are ready

iOS

1. Install the „TestFlight“ app from the App Store.
2. Get the invitation:
iOS app is currently in the testing phase – testers must send email to: dev@spirit-system.com to get invitation.
3. Install the latest iOS app through the TestFlight (when you will receive the invitation).
4. Go to the Settings/Wi-Fi in the iOS, search for a new networks.
5. Connect to the „Spirit Wifi-Link ...“ network.
6. Open the Spirit-Settings app.

PC & Mac

Will be supported with upcoming 2.0.2 in the following days.
